

AMENDMENTS

Please amend the above-identified application as follows:

In The Claims

Please substitute the following claims for claims of the same number currently pending in this application:

SUB
C1
B1

36. (Twice Amended) A printed circuit board comprising:
a printed wiring board;
a plurality of components mounted on said printed wiring board; and
an electrically continuous conformal coating for conformingly adhering to
surfaces of one or more regions of the printed circuit board to which the conformal
coating is applied, comprising,
a conductive coating that prevents the electromagnetic waves from passing
therethrough, said conductive coating conformingly adhered to the surface of the
one or more regions of the printed circuit board, and
a dielectric coating interposed between said conductive coating and
predetermined portions of each of the one or more printed circuit board regions,
wherein said dielectric coating is conformingly adhered to and insulates said
predetermined portions of said printed circuit board region.

SUB
D1
B2

50. (Twice Amended) The printed circuit board of claim 36, wherein one or more
components are coated individually with said conformal coating, wherein said conformal
coating which coats the one or more components is electrically connected to said
conformal coating on said printed circuit board.

Please add the following new claim 71:

SUB
D2
B3

71. (New) The printed circuit board of claim 36, wherein the conformal coating applied
said one or more regions of the printed circuit board define regions of said conformal
coating, wherein said regions of said conformal coating are connected electrically to each
other.
